

*Can man communicate with other animals?
Is language not unique to humans?
If so, is mankind's position in nature's hierarchy challenged?*

Donald R. Griffin

attacks these and other questions in his revised and enlarged edition of

The Question of Animal Awareness

Evolutionary Continuity of Mental Experience

THE QUESTION OF ANIMAL AWARENESS has been widely reviewed. *The Christian Science Monitor* chose it as one of the best books of 1981. Writing in *The Sciences*, Sir Peter Medawar called it "lucid and well written" and stated that it ". . . has an immediate and special bearing on current issues of animal welfare." *The West Coast Review of Books* said: "Between the extremes of considering animals either far too intelligent or too stupid for awareness lies the whole body of Griffin's inquiry, in fascinating, compelling array."

The book is a selection of the Natural Science Book Club, The Library of Science, and the Birding Book Society. A number of universities have adopted it for seminars and classes in the behavioral sciences.

220 pp., bibliography, indexes Hardcover: ISBN 87470-035-3
\$13.95 plus \$3.00 postage and handling (\$3.50 foreign)
