

It has never been more important to keep abreast of the latest developments in clinical investigation.

It has also never been more difficult.

Just when the flood of clinical literature is about to drown us all, there's **Perspectives in Clinical Investigation**: a brief, lucid overview of current developments in biomedical research. It's written for the researcher with too much to read and too little time to read it.

The thirteen concisely written articles in **Perspectives** cut across discipline lines to summarize state-of-the-art developments in rapidly advancing fields like AIDS, sleep apnea and anticoagulant mechanisms.

Each article is written by a leading investigator in the field and emphasizes problems, prospects and accomplishments, as well as applicability to other areas of biomedical research.

Reprinted from The Journal of Clinical Investigation, the official publication of the American Society of Clinical Investigation, **Perspectives**

**Perspectives
in Clinical
Investigation**

provides a window on important developments in biomedical research that will interest researchers and clinicians alike.

Clinical
Investigation**

Perspectives — Contents

Lipoprotein Receptors in the Liver. Control Signals for Plasma Cholesterol Traffic.

M.S. Brown and J.L. Goldstein

Plasma Membrane Receptors.

R.J. Lefkowitz and T. Michel

Arachidonate Metabolism in Vascular Disorders.

P.W. Majerus

Regulation of Contractile Proteins by Phosphorylation.

R.S. Adelstein

Guanine Nucleotide-binding Regulatory Proteins and Dual Control of Adenylate Cyclase.

A.G. Gilman

Proton Transport and Cell Function.

H.E. Ives and F.C. Rector, Jr.

The Respiratory Burst of Phagocytes.

B.M. Babior

The Biologically Active Leukotrienes. Biosynthesis, Metabolism, Receptors, Functions, and Pharmacology.

R.A. Lewis and K.F. Austen

Surface-mediated Defense Reactions. The Plasma Contact Activation System.

R.W. Colman

Sleep Apnea and its Causes.

N.S. Cherniack

Natural Anticoagulant Mechanisms.

R.D. Rosenberg and J.S. Rosenberg

Steroid Hormone Action in Eucaryotic Cells.

B.W. O'Malley

Platelet-derived Growth Factor. Structure, Function, and Roles in Normal and Transformed Cells.

T.F. Deuel and J.S. Huang

Perspectives in Clinical Investigation
