

Behavioral Neuroscience

One of the New Leaders!

Behavioral Neuroscience, is one of APA's newest journals. The articles explore the relevant biological and neural sciences such as anatomy, chemistry, physiology, endocrinology, and pharmacology. The studies on the genetic, evolutionary, and developmental aspects of behavior are covered along with subjects mentioned

above in original research papers. Through *Behavioral Neuroscience*, you can keep up with the broad field of the biological bases of behavior. Another added feature of this journal are the review articles and theoretical papers which appear in the issues throughout the year.

Here are some of the subjects that will be appearing in 1985 issues:

- How learned fear can alter basic reflexes
- Experience induced plasticity in the spinal cord
- Age-related changes in learning abilities in animals
- Effects of conditioned fear on responsiveness to pain
- *Review article*—Involvement of the amygdala in learning and memory
- Roles of different regions of the cerebral cortex in memory of monkeys
- Rats learn to like the taste of morphine.

Start my subscription to *Behavioral Neuroscience* immediately. If I return the unmarked issue(s) within 30 days, I'll get my money back in full. I can always cancel and get my money back on unmailed issues . . . so there's no risk to this offer. 1 year subscription—6 bimonthly issues*
