Cell Biophysics

Cover picture: Multimodal multiphoton microscopic characterization of ex vivo spinal tissues. Shown are sum frequency generation imaging of astrocyte processes (*green*), coherent anti-Stokes Raman scattering imaging of myelin sheath (*red*), and two-photon excitation fluorescence imaging of SR101 (*gray*) and calcium indicator Oregon Green 488 BAPTA-2 AM (*blue*), both labeling the astrocyte processes. Bar = 10 μm for the left and middle columns. Bar = 5 μm for the right column. See the article by Fu et al. on page 3251.
